AI Adaptive Installation Delay

Dear TAMC Board Members

I fully support the statements in Dwight Stump's letter to you regarding lack of definitive answers and status regarding the Adaptive AI Installation Delay re SR68.

Having been involved from the original Public sessions, in highlighting this technology and providing reasoning to the Board on why it should be adopted ...and helping gain the commitment of TAMC Board to provide the necessary funding for the project.... I simply do not understand why there has been such a delay in getting this procurement completed.

Before the holiday break Scott said the the Co-Op agreement was nearly completed and gave warm and fuzzy words....

At the August TAMC Board Meeting the Caltrans representative..Brenda Ryder?..stated that the installation would be complete by end of 2025. Todd Muck also made the same statement.

So where are we on the procurement to achieve this date.. are we brewing up for yet another round of excuses?

Someone please ask some searching questions and “hold feet to the fire”

Thankyou for reading this and please make some waves to make this installation actually happen by end 2025.

Best Regards
Barry Jones
