**2015 Without-Project Traffic Conditions**

This section presents without-project traffic conditions in the study area in 2015, which is considered the likely timeframe for project buildout.<sup>4</sup> Traffic projections were developed based on the 2010 General Plan (2010 GP). The recently completed EIR for the General Plan contained existing and forecasted daily traffic for SR 1, SR 68, US 101, and SR 156 (County of Monterey 2008). The existing traffic represented 2008 traffic. As part of the General Plan work, the Association of Monterey Bay Area Governments (AMBAG) Regional Travel Demand Model was updated and calibrated to the 2008 traffic. Land use forecasts in the model were then updated to reflect the General Plan for unincorporated areas of the county. Development information for incorporated areas and in adjacent counties, including Santa Cruz, San Benito, and parts of Santa Clara, was obtained directly from the Year 2030 AMBAG land use forecasts. According to discussions with County representatives, the proposed project was not considered in the land use forecasting used for the General Plan.

The General Plan provided daily traffic forecasts for 2008 and 2030 on several roads in the study area. Annualized growth factors were derived from the general plan work. Because the general plan expected growth to be different across the county, different growth rates were derived for each study area, as shown on Table 3.11-11. These annualized growth factors were then applied to the existing (2011) traffic volumes to obtain forecasts for 2015.

<sup>4</sup> Even if some project components were to be built later, this analysis would provide a conservative approach.
